

Windsor ON.

6 Storey Condominium

On this site, we provided and installed our standard aluminum picket railing on all balconies. The project consists of six six-storey condominiums, encompassing approximately 160 units.

Over the course of two years, we installed approximately 2,800 linear feet of aluminum picket railing. There were no delays on our part, as we acquired the necessary materials approximately one year prior to the commencement of the project.

Our railing systems are lab-tested to meet and exceed local and int'l building codes.
